

## PLAYTILE 865

### Safety rubber tiles

Safety tiles made of black or colored recycled SBR rubber in thickness from 2.5cm till 10cm and in dimensions of 50X50cm and 100X100cm.

Consist of polyurethane resins and colored recycled SBR rubber. They create a safe flooring for playgrounds and kindergartens, for interior and exterior surfaces. They can be applied easily on stable surfaces of asphalt or cement (with the parallel use of **PU FLEX 140**) or even on compacted fine gravel. They provide excellent shock absorbcency, according to European Standards (EN 1177) and BS EN 71-3: 1995.

Thickness: 25mm to 100 mm

Dimensions: 500mm X 500mm, 1000 x 1010 mm

Tile Weight: 5.78 kg (+/- 0.1kg) for 40mm

Tile Colours: Top layerPigmented: Green / Red (except black)

Tile Colour - Bottom : Black SBR

Material : Full SBR recycled rubber particles

Bottom Drainage: 64 blocks (7 x 7 drainage lines)

Quantity per 1m<sup>2</sup>: 4 pieces

Critical fall height: 1.3m according to BS EN 1177: 2008

**Places of use:** universally usable

**Installation:** full glue down to the ground on bound sub-grounds or side-to-side gluing.

**Recommended glues:** PU FLEX 140 polyurethane-based glue for total glue-down. Amount needed: app. 500-800 gr/m<sup>2</sup>. For side to side gluing use PU FLEX 140 or alternative.

**Tolerances and note about material:** Tolerances in thickness: +/- 1 mm,

\*Tolerances in measurement: +/- 1 %. Rubber-tiles react to changes in temperature and humidity. This reaction can mostly be prevented by fully adhering the tiles to the ground (cementor asphalt).
